Investment Case

Valuation Summary 📝 To ensure the competitiveness of the investment, we conducted a thorough verification of the purchase price by analyzing recent gallery transactions and current auction results. Our analysis confirmed that the price offered, inclusive of all associated fees, is still highly competitive. To estimate the potential ROI, we used the average primary market price increases of same-sized paintings by Cooper and compared them to the purchase price. For our conservative scenario, we assumed the value of the painting would grow at the rate of Swiss inflation, reflecting a defensive approach. In the balanced scenario, we assume a 100% probability of realizing the average annualized price increase on the primary market over the last two years. Finally, in the ambitious scenario, we assume a 100% probability of realizing the average annualized price increase on the primary market over the last two years.

Exit Options at Maturity 📅 We will manage the exit strategy on behalf of our investors, ensuring the best possible outcome based on market conditions at the time. Depending on the prevailing market situation, the painting will be sold to a private collector or offered as a single lot at an auction for contemporary art. An auction is considered if the price has developed to the point where the minimum bid matches the market value and there is high demand for works by the artist. Both options are carefully considered, and we will choose the one that maximizes the return for our investors.
